Part of Paper No. 01052004

Continuation of 5. does NOT place the application in condition for allowance because: The argued benefit of the third and fourth protective layers (page 4-5 of response) is already appreciated in the art as evidenced by its descrption as a barrier layer by Yamada et al. '063 (5/65-6/36) and therefore cannot be considered as a basis for unobvious results. The Hirotsune et al. reference also describes multilayered protective layers (12/50-67) The respect to the issue of the reflective layer's bilayer structure, the thermal transfer properties of each of the reflective layers is appreciated together with the effects of these reflective layers on the rapid cooling structure, low reactivity of the materials and the stability of the recording medium to plural rewrites. (13/32-17/17). The specific desirability of the first reflective layer containing W, Mo, Ta and the second containing Al,Ag, Au is noted (17/7-17). If the first reflective layer is pure Mo, Ta, or W, as dicussed in column 17, then most assuredly, the Al, Ag, Au content is minimal and less than that of the pure Ag,Al,Au reflective layer. The rejection stands.
